

Forget the Middle East. Forget Statoil and their crude oil. If all goes as planned for the company Lipotechnica and their development, a part of the city's vehicles get their fuel from a greasy, yellowish liquid distilled from the remnants of liposuction.

HUMAN FUEL represents the latest in environmentally friendly and human ethical direction of the alternative energy.

We humans spend a lot of our energy and creativity to devise new solutions such as biofuels. In this process it is easy to forget the invaluable resource we can make, it is time for a person eye toward ourselves.

As an alternative to the ever-increasing gas and oil prices may be HUMAN FUEL step towards improving the commercial actors his management of environmentally friendly actions and community relations.
